Continued Examination Under 37 CFR 1.114

A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after allowance. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, prosecution in this application has been reopened pursuant to 37 CFR 1.114.

Applicant's submission filed on August 15, 2003 has been entered.

Allowable Subject Matter

Claims 1, 3, 5-25, 27, 29-49, 51, and 52 are allowed.

The following is an examiner's statement of reasons for allowance:

As indicated in the office action of June 3, 2003, the prior art does not disclose or suggest a tissue or hygiene web producing machine having at least the claimed combination of water-permeable continuous carrying belt, drying cylinder, shoe press unit that forms a nip with the drying cylinder, suction roll located before the shoe press, and an overpressure device assigned to the suction roll, whereby the forming wire transports the web from a forming roll through each of the dewatering devices, and further whereby the machine speed is over 1800 m/min.

The claimed suction roll and overpressure device along the permeable belt and the claimed machine speed read over any obvious modifications to the tissue machine of Tietz (US 6,235,160). In Tietz, the suction roll removes water from the permeable belt to improve its performance in the press nip. In the present invention, the overpressure device on the suction roll provides for increased web dewatering and improved runnability, thereby allowing the machine to be run at a high speed.
